

*E2* 8. In a PC/TV computer system having keyboard for providing alphanumeric  
2 characters to said PC/TV computer and also having a display monitor, a method of  
3 selecting a network station comprising the steps of:  
4       storing by a manufacturer predetermined network station names;  
5       placing said PC/TV computer in one of a TV mode and a Computer mode;  
6       pressing a first alphanumeric key on said keyboard;  
7       creating a monitor display of the or each stored network station name  
8       containing a first character matching the character associated with said first alphanumeric  
9       key r;  
10      effecting user input to the system to mark the or a user selected displayed  
11     network station name; and  
12      then effecting user input to the system to tune to a network station  
13     corresponding to the displayed network station name marked by said user input.

*E3* 10. The method of claim 8, wherein the or a user selected displayed network  
2 station name containing a matching first character is highlighted.

*E4* 11. The method of claim 8, wherein said monitor display is effected in an  
2 active window of said display monitor when the system is in said Computer mode.

*E5* 12. The method of claim 8, wherein the step of displaying is performed by  
2 providing a channel banner on the display monitor.

*E6* 17. The method of claim 8, wherein said user input to tune to a network  
2 station is effected by actuation of a key on said keyboard.

*E6  
Concluded  
2*

18. The method of claim 8, wherein said user input to tune to a network  
station is effected by user operation of a pointing device.

---

Please add the following new claim:

*E7*

1 19. The method of claim 8, wherein in said TV mode said PC/TV has a full  
2 screen display and no user accessible PC functionality and in said Computer mode said  
3 PC/TV has user accessible PC functionality and a video window in said display.
